

CONSOLIDATED DEEP RESEARCH

# UAE WORKER & STAFF ACCOMMODATION

Investment case recovered from the final comparative Deep Research

**United Arab Emirates | Evidence consolidated 24 August 2026**

DATA-INTEGRITY BOUNDARY

This document reproduces the real data available in the completed Final Comparative Analysis. It does not invent the missing standalone report, business-specific operating schedules, supplier quotations or location tables.

# Contents

The static contents remain usable in Word, PDF and print.

# 1. Evidence Status and Executive Summary

**EVIDENCE STATUS** Comparative evidence consolidation; no standalone worker-accommodation report was recovered. The source of record is [R1].

| Metric           | Recovered conclusion                                 | Classification                |
|------------------|------------------------------------------------------|-------------------------------|
| Overall rank     | 7 of 14                                              | INVESTMENT JUDGEMENT          |
| Score            | 69.1 / 100                                           | COMPARATIVE MODEL             |
| Committee stance | CONDITIONAL - CORPORATE DEMAND FIRST                 | INVESTMENT JUDGEMENT          |
| Source depth     | Final comparative report plus cited external sources | LIMITED; no standalone report |

The completed comparative research ranks worker/staff accommodation seventh and treats it as a conditional real-asset strategy. AD Ports Group's Sdeira platform provides company-reported evidence of high occupancy at scale, but the report links future expansion directly to contracted demand and partnership or asset-light structures. The preferred model is a corporate master lease or build-to-suit; speculative capacity is not recommended. [R1][S9]

## Category Position

| Category            | Position     | Recovered rationale                                                       |
|---------------------|--------------|---------------------------------------------------------------------------|
| Real-asset role     | Core-plus    | Contracted accommodation can combine asset backing with operating income. |
| Committee condition | Demand first | Corporate master lease or equivalent commitment must precede capacity.    |
| Overall ranking     | 7 of 14      | Conditional rather than speculative development.                          |

# 2. Research Scope and Method

R1 compares fourteen UAE businesses and real-estate opportunities using expected return, downside protection, market growth, competitive intensity, cash conversion, scalability, management simplicity, asset backing, strategic synergy and exit liquidity. Earlier individual reports were not exposed to that Deep Research run; the financial figures were therefore presented as committee-underwritten IC estimates rather than quoted market statistics. [R1]

| Scoring factor        | Weight |
|-----------------------|--------|
| Expected return       | 20%    |
| Downside protection   | 15%    |
| Market growth         | 15%    |
| Competitive intensity | 10%    |
| Cash conversion       | 10%    |
| Scalability           | 10%    |
| Management simplicity | 5%     |
| Asset backing         | 5%     |
| Strategic synergy     | 5%     |
| Exit liquidity        | 5%     |

### 3. Macro and Financing Context

| Context                 | Recovered figure                                     | Evidence type                    | Use / limitation                             |
|-------------------------|------------------------------------------------------|----------------------------------|----------------------------------------------|
| UAE real GDP            | 6.2% growth in 2025; 1.7% forecast for 2026          | GOVERNMENT / PRIMARY-SOURCE DATA | Macro context, not venture revenue. [S1][S2] |
| UAE non-hydrocarbon GDP | 6.8% growth in 2025; ~1.9% forecast in 2026          | GOVERNMENT / PRIMARY-SOURCE DATA | Macro context. [S1][S2]                      |
| Dubai Q1 2026 GDP       | +2.4%                                                | GOVERNMENT / PRIMARY-SOURCE DATA | Dubai activity context. [S3]                 |
| Dubai construction GVA  | +8.2% YoY to ~AED18.7B in Q1 2026                    | GOVERNMENT / PRIMARY-SOURCE DATA | Demand backdrop, not direct orders. [S3]     |
| Three-month EIBOR       | ~3.84% on 21 Aug 2026                                | GOVERNMENT / PRIMARY-SOURCE DATA | Point-in-time financing context. [S5]        |
| CBUAE Base Rate         | 3.65%                                                | GOVERNMENT / PRIMARY-SOURCE DATA | Referenced in R1. [S6]                       |
| Debt pricing            | EIBOR + 2.25-3.00 pp; ~6.1-6.8% before fees          | MODELLED ASSUMPTION              | Obtain actual bank term sheets.              |
| UAE corporate tax       | 9% normal rate; 0% band to AED375,000 taxable profit | GOVERNMENT / PRIMARY-SOURCE DATA | Apply entity-specific tax advice. [S4]       |

**INTERPRETATION** These macro and financing figures are common context from R1. They do not replace company, property, plant or contract-level underwriting.

### 4. Market Evidence and Investment Logic

| Evidence item             | Recovered figure / finding                 | Period       | Classification                   | Source / limitation                            |
|---------------------------|--------------------------------------------|--------------|----------------------------------|------------------------------------------------|
| Sdeira platform occupancy | 94%                                        | End-2025     | COMPANY-REPORTED DATA            | Up from 67% in 2024. [S9]                      |
| Beds leased               | >130,000 of ~139,000                       | End-2025     | COMPANY-REPORTED DATA            | AD Ports Group disclosure. [S9]                |
| Expansion structure       | Contracted demand; partnership/asset-light | 2025 report  | COMPANY-REPORTED DATA            | Future expansion context from Sdeira. [S9]     |
| Compliance framework      | Municipality rules apply                   | 2026 website | GOVERNMENT / PRIMARY-SOURCE DATA | Dubai Municipality guidance cited by R1. [S11] |

## 5. Normalised Financial Model

**MODEL WARNING** All figures in this section were labelled IC ESTIMATE or MODELLED ASSUMPTION in R1. They are stabilised committee underwriting ranges, generally after a two- to three-year ramp for greenfield businesses; they are not quoted company forecasts or executable investment models.

| Metric                       | Recovered range | Evidence status                                          |
|------------------------------|-----------------|----------------------------------------------------------|
| Minimum viable CAPEX         | AED20-30M       | IC ESTIMATE                                              |
| Optimal CAPEX                | AED40-60M       | IC ESTIMATE                                              |
| Working capital              | AED1-3M         | IC ESTIMATE                                              |
| Optimal total capital        | AED41-63M       | IC ESTIMATE                                              |
| Stabilised revenue           | AED7-11M        | IC ESTIMATE                                              |
| EBITDA / NOI margin          | 50-60%          | IC ESTIMATE                                              |
| Operating cash flow          | AED3.5-6.2M     | IC ESTIMATE                                              |
| Free cash flow               | AED3.5-6M       | IC ESTIMATE                                              |
| ROIC                         | 9-13%           | IC ESTIMATE                                              |
| Payback                      | 8-10 years      | IC ESTIMATE                                              |
| Five-year levered/equity IRR | 13-17%          | IC ESTIMATE                                              |
| Five-year equity multiple    | 1.8-2.2x        | IC ESTIMATE                                              |
| Committee cash cycle         | 30-60 days      | MODELLED ASSUMPTION; very good under corporate structure |

## 6. Entry Strategy and Operating Requirements

| Decision area       | Recovered position                                                                    |
|---------------------|---------------------------------------------------------------------------------------|
| Preferred route     | Acquire or build-to-suit with a corporate master lease.                               |
| Demand gate         | Demand must precede capacity.                                                         |
| Operating structure | Prefer corporate contracting and partnership/asset-light expansion where appropriate. |
| Compliance gate     | Verify the applicable labour-accommodation operating and technical requirements.      |

The completed comparative report strongly prefers acquisition where the real assets are approvals, people, customer relationships, utilisation history and order books. Greenfield entry is acceptable only where demand, land, approvals and the operating model are visible before capital is committed. [R1]

## 7. Capital Allocation and Strategic Fit

| Portfolio context | Recovered allocation / implication                                                   |
|-------------------|--------------------------------------------------------------------------------------|
| AED250M portfolio | AED35M / 14% to worker accommodation with contracted demand.                         |
| Five-year return  | 13-17% levered/equity IRR in the IC underwriting.                                    |
| Ten-year return   | 12-15% levered IRR for contracted worker accommodation.                              |
| Property cluster  | A contracted-demand asset class alongside warehouses, cold storage and self-storage. |

### Strategic Platform

R1 places worker accommodation inside a specialist real-assets platform with warehouses, cold storage and self-storage. Its role is contracted-demand accommodation, not speculative bed creation. [R1]

The illustrative AED250M portfolio assigns AED35M / 14% only where contracted demand is present. [R1]

## 8. Principal Risks

| Risk                    | Why it matters                                                                                        |
|-------------------------|-------------------------------------------------------------------------------------------------------|
| Uncontracted capacity   | Speculative beds can leave a capital-intensive asset underoccupied.                                   |
| Corporate concentration | A master lease improves cash conversion but can concentrate counterparty and renewal risk.            |
| Compliance              | Accommodation must meet applicable operating and technical requirements.                              |
| Occupancy/renewal       | Returns depend on contracted occupancy and durable employer demand.                                   |
| Development structure   | The report prefers partnership and asset-light approaches when expansion demand is not fully secured. |

Cross-portfolio risks retained from R1 include construction-payment shocks, logistics and imported-cost volatility, customer concentration, greenfield utilisation failure, management complexity and exit risk. [R1]

## 9. 100-Day Due-Diligence Plan

### Days 1-30 - Build the Pipeline

- Minimum operating-business target: approximately 18% base-case equity IRR unless strategic value is exceptional; core property hurdle: approximately 12-15% five-year levered IRR.
- Maximum initial leverage in R1: approximately 35% for industrial operations and around 45% for core income property, unless asset quality and coverage justify more.
- No greenfield plant approval without contracted demand; obtain actual bank term sheets.

### Days 31-60 - Turn Research into Evidence

- Build a pipeline of corporate master-lease or build-to-suit opportunities.
- Verify employer credit, contracted bed count, lease term, escalation, renewal and termination rights.
- Confirm site approvals and the applicable accommodation compliance requirements.
- Underwrite occupancy and cash flow from executable corporate demand rather than market-wide bed estimates.
- Authorise capacity only when the contract structure clears the return and downside gates.

### Days 61-100 - Close Only What Clears the Gates

Do not promote an IC range into an investment approval. Final authority requires transaction-specific prices, contracts, permits, technical diligence, operating budgets, working capital and financing terms.

## 10. Missing Information

- No site-by-site rent, land, bed-density, operating-cost or competitor schedule was reproduced in R1.
- No identified employer master lease or transaction-specific term sheet was available.
- The IC financial ranges are not a property-specific development or acquisition model.
- No standalone Worker / Staff Accommodation Deep Research report was recovered from prior chats or Library files.

**DATA-INTEGRITY DECISION** The correct treatment is to preserve these gaps. They are not filled with generic market knowledge, assumed quotations or fabricated operating data.

## 11. Source Register
